

## ELOCK FORMSEAL Version 2.0

### ELOCK FORMSEAL

E-Lock FormSeal is a platform independent digital signature tool that can be integrated with any web application, to enable digital signing/verification. FormSeal uses digital certificates (X.509) to sign data. Users can sign and submit information to the server and the server verifies the information before accepting it and returns a transaction receipt to the user. FormSeal can be customized to your requirements.

FormSeal is a digital signature tool that can be integrated into any existing web application, to enable digital signing and verification from within the application itself. FormSeal uses digital certificates (X.509) to digitally sign data. Through FormSeal, users (clients) can digitally sign and submit information to the server (organization). On receiving the users' data, the server verifies the information before accepting it and returning a receipt to the user for the transaction.

Maintenance entitles the customer to free support and free upgrades for 1 year.
