EZESCAN

EZESCAN SCANNING SOLUTIONS

EzeScan is Outback Imaging's flagship document scanning product suite. EzeScan is integrated with many of the leading enterprise document/records management (EDRM) systems. Each integration provides several levels of connectivity between EzeScan and the EDRMS (e.g. directory import, API integration launching EDRMS profile cards, API integration bypassing EDRMS profile cards, or ODMA launching EDRMS profile cards). EzeScan uses an enhanced TWAIN / ISIS scanner interface to unleash the full power of your scanning hardware (see our supported scanner list).

EzeScan is now fully integrated with Microsoft SharePoint, Xerox DocuShare, DocuWare and ACT By Sage, Open Text eDOCS, Open Text Content Server, HP TRIM, Objective ECM, infoXpert eDRMS/ECM, Interwoven WorkSite NT, DocuVantage OnDemand, Autonomy Meridio.

EzeScan's inbuilt ODBC connector allows lookup and validation from any SQL-compliant database (SQL Server, Oracle, DB2, Access, etc). The UPLOAD module can insert metadata, references to documents stored on the filesystem or document images as BLOBS directly into the database. Many clients use these features to image-enable existing systems that are built on SQL databases.

EzeScan lets you scan a document once, index it multiple times and upload it to multiple systems. For example, you could save customer service metadata and images to an EDRM system, and then save financial metadata to an SQL database, all in in one scanning transaction.

EzeScan is used to provide document scanning solutions globally.
