

FACETTERM

UNIXREVIEW OUTSTANDING PRODUCT'93, INCLUDED IN HP TERMINALS,

This is one of the best products we know about: really usefull and productive, full eval on 50 users for 30days, low-priced. We use it all the time on our terminals and emulations. It gives a second life to existing terminals and a solid alternative to upgrading your hardware at a fraction of the cost. Hewlett-Packard includes this product in standard on their new HP700 character terminals. Works better for a better cost than multisession terminals.

FacetTerm lets UNIX system users run multiple concurrent sessions from a single character terminal. Up to ten simultaneous sessions may be managed from a standard terminal, an Alpha Window terminal or a PC with terminal emulation. Users can hot key from one session to the next as often as they want. FacetTerm features include copy and paste between screens, Window Watch capability, screen print and a pull-down menu interface. - FacetTerm significantly improves productivity by allowing simultaneous access to database management, word processing and spreadsheet applications, as well as access to compilers, editors, system administration functions, e-mail, fax status, 3270 mainframe communications or any other UNIX application. FacetTerm acts as the glue that binds together these various UNIX applications.

But most importantly, FacetTerm provides these capabilities without any changes to your operating environment. FacetTerm allows you to run virtually any character application with practically any character terminal on any UNIX host system. FacetTerm provides the same functionality on any AlphaWindow terminal or PC with terminal emulation capability. The user interface can be customized, making FacetTerm even easier to use. Applications can be automatically launched when a user logs in, and the pull-down menus can be tailored so that they reflect the applications available to each individual user. If the user needs access to multiple or remote hosts, FacetTerm can start any communication software needed for remote access, and log in to these systems.

The Window Watch feature automatically notifies you when you receive an electronic mail message, even when your mail application is not on screen. This powerful feature allows you to monitor files, or offscreen window activity. If you are waiting for a report to finish, Window Watch can even look for a specific message to the screen. FacetTerm also provides enhanced data security with the screen lock feature.

Run up to 10 simultaneous applications - Use with character terminals, Alpha-Window terminals, or PCs with a terminal emulator - Copy and paste between applications - Print the screen to a system printer - Receive automatic notification of e-mail and any other off-screen activity - Improve data security with the screen lock feature - Use terminal page memory for instantaneous screen refresh - Leverage the 132 column/43 line mode in many terminals - Use a printer attached to a terminal as a shared spooled device - Take advantage of the easy-to use, customizable pull-down menu interface - Speed up switching between sessions with the accelerator keys.
