

## VSIFAX VERSION 6

### VSI-FAX® V6 ON UNIX, NT AND LINUX SERVERS: PRODUCTION FAX AND COMPLETE SYSTEMS

Since 1989 VSIFAX has installed 35.000 systems from 1 to 1400 users, based on Unix, Linux and NT servers, with 1 to 120 lines. Arsys has made 1000 installations in West European countries, with up to 120 lines.

Esker VSI-Fax provides a comprehensive, multi-platform fax solution for both small and large businesses that enables faxing of any document from any application running on Linux, Unix or Windows. With Esker VSI-Fax you benefit from a versatile server-based solution that fax-automates critical business applications and communications. By employing Esker VSI-Fax intergration technology to eliminate inefficient paper-centric communications and processes, businesses can substantially increase productivity and reduce costs.

#### NEW FEATURES ON VSI-FAX VERSION 6 INCLUDE:

- Fax on Demand Ready on all Supported Operating Systems: Automatically installed with the server, the Fax on Demand Connector is now supported on all the Operating Systems supported by VSI-FAX. To use outsourced fax services provided by Esker, you only need to contact Arsys to establish an Esker on Demand account and to enable the Fax on Demand Connector device.
- New LanFax Windows Client: Usability is highly improved for Microsoft Windows users with VSI-FAX 6.0 thanks to LanFax, a new Windows Client. The former VSI-FAX Windows Client remains available on the CD-ROM as an unsupported client.
- Support of real-time Fax over IP: Esker VSI-FAX 6.0 supports all Brooktrout Fax over IP solutions: the TR1034 Intelligent Fax Board and the SR140 Host-based Fax over IP processing software. The TR1034 fax board configuration procedure has changed a lot. Follow the procedure described in brooktrout.pdf for successful board configuration.
- Extended OS Support on Cantata Technology Brooktrout boards: With the inclusion of the latest SDK, VSI-FAX 6.0 supports Brooktrout fax boards on Microsoft Windows, Red Hat, Red Hat Enterprise and Sun Solaris SPARC (32-bits only). For more details, refer to the hardware.pdf file delivered in the \docs subfolder on the VSI-FAX 6.0 CD-ROM.
